DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 12 provides for the use of the sodium percarbonate particles, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 12 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1754

A person shall be entitled to a patent unless – (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Korvela (WO 95/15291).

Korvela teaches the production of sodium percarbonate particles with a coating of sodium bicarbonate. Spraying a solution of sodium bicarbonate onto a fluidized bed of sodium percarbonate particles, with the fluidizing gas containing carbon dioxide, produces this coating. Optionally, additional coatings, such as a sodium sulfate, may be applied by conventional methods. This coating gives sodium percarbonate improved stability and renders it more suitable for its use in detergents. No difference is seen between the coated sodium percarbonate particles of Korvela and those of the instant application.

Allowable Subject Matter

Claims 1-10 are allowed. The following is a statement of reasons for the indication of allowable subject matter: Prior art neither teaches nor suggests coating sodium percarbonate particles with an aqueous spray solution containing dissolved carbon dioxide.
